Students will need access to the following:

- Graphics of the natural water cycle
- Drawing supplies
- Information on local drinking water supply
- A global map to accurately draw a travel map
- Texts or online sources to identify drinking water sources on land and large underground aquifers

Learning Goals

- Understand the various phenomena that work together to form the natural water cycle (i.e., phase changes and transport processes)
- Understand that the natural water cycle is recycled on a global scale and that all the water we have is what has always been here
- Learn the many sources where drinking water originates
- Learn your local drinking water source
