Module 6 Outcomes Assessment:

Formative: In the midst of learning, ask students to explain their current understanding and provide corrective feedback as necessary on all objectives.

Summative/Deliverables:

Students will complete a decision-making matrix which will become part of their summary and presentation. (obj. E)

Students will produce a written reflection on their career findings which includes their selected career fields, their decision-making matrix, and their determination if any of those selected fields aligns with a career in, or related to, the water/wastewater industry. (obj. F and G)

To assess, a rubric that lists all required elements should be created for the written reflection (see How Learning Occurs for basic explanation of rubric building; see the Example Rubrics on p. 33 *simple rubric* and p. 34 *performance rubric*).

Students will create a professional-looking, personal infographic to summarize their findings. (obj. H)

To assess, a rubric that lists all required elements should be created for the infographic (see How Learning Occurs for basic explanation of rubric building; see the Example Rubrics on p. 33 *simple rubric*, p. 34 *performance rubric*).
