**Module 6 Measurable Learning Objectives:**

A. Students will research the current shortage of career workers in the water/ wastewater industry to identify the reasons this shortage exists.
B. Students will research the expected decline in jobs in the water/wastewater industry to identify the reasons this decline is expected.
C. Students will discuss and compare their reasoning on how the water/wastewater industry is expected to shrink in the next few years while, at the same time, it is currently experiencing a significant shortage of career workers.
D. Students will use three different inventories (aptitude/interest/career) to identify two to three different careers in which they are interested.
E. Students will rank their identified careers (obj. D) by completing a decision-making matrix to compare the career pros and cons.

| Career Element | Career 1 | Career 2 | Career 3 |
|---|---|---|---|
| Required education level | | | |
| Level of personal interest | | | |
| Physical activity level | | | |
| Level of expected interaction with others | | | |
| Expected work week (work-life balance) | | | |
| Income potential | | | |
| Potential for travel | | | |
| Potential for career advancement | | | |
| Potential for growth in the industry | | | |
| Local job availability/need to relocate | | | |

F. Students will determine if at least one of their chosen career fields is related to a career in the water/wastewater industry or relate field (as listed in this Module).
G. Students will produce a written reflection on their findings for objectives E and F.

H. Students will create a personal infographic to summarize and present their findings for objectives E, F, and G.
